### **DETAILED ACTION**

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/28/06 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 17-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Tsai (5,443,591)).

Tsai discloses the method of the present application comprising: forming at least one groove in a socket housing 12 contiguous to a surface mount region for an electrical device 10, securing a rigid bar or shaft 76 into the groove to thereby ensure that the surface mount region is flat (see Fig. 4 and /or related embodiment of Fig. 12).

As applied to claims 18-19, refer to Tsai's Fig. 4, which shows the groove is in form U shaped, and the rigid bar as a rod or shaft 76.

Limitations of claims 20-25 are also satisfied as the above discussion.

4. Further, Claims 17-25 are also rejected under 35 U.S.C. 102(b) as being anticipated by Lai et al (5,722,848).

Lai et al disclose the product by process including the forming at least one groove 13 or 4 in a socket housing 3 or 5 contiguous to a surface mount region for an electrical device 1, securing a rigid bar or shaft 11 into the groove to thereby ensure that the surface mount region is flat (see Fig. 2). Noting another embodiment such as Fig. 4, depicts the above configurations where a groove is formed in the housing for securing the shaft 48 therefrom.

As applied to claims 18-19, refer to Lai's Fig. 4, which shows the groove is in form U shaped, and the rigid bar as rod 11.

Limitations of claims 20-25 are also satisfied as the above discussion
